Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

(Namely, it is improper to use the term "means" in the abstract.)

The disclosure is objected to because of the following informalities: there are no headings in the specification, e.g. "Detailed Description of the Drawings", etc. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-5, 8-11, and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. For claim 1, it is unclear whether or not the support element is to be claimed in combination with the sliding pivot means. In the preamble of the claim, only the pivot means

Art Unit: 3637

is positively claimed ("means for a support element"); however, in the body of the claim, the element is positively claimed with the means (e.g. "a socket (of the means) substantially parallel with said transverse portion (of the element)"). In claims 3 and 5, the item and/or stanchion are also being positively claimed with the sub-combination means. (In claim 1, they are not being positively claimed.) For examination purposes, the combination will be considered the claimed subject matter. For claim 8, "the stanchion" lacks antecedent basis.

Allowable Subject Matter

Claims 1 and 8 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claims 2-5, 9-11, and 13 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Claims 7 and 14-23 are allowed.

(For claims 1, 7, 8, 14 and 21, the prior art fails to teach a sliding pivot means used with a support element. The means is also usable with a stanchion which is hinged to an item with which it is used and from which it can be unfolded. One end of the support element is attachable to the stanchion while the opposite end has a transverse portion extending there from. The means including a slide and a sleeve provided with a slide pin extending in substantially the same plane as the sleeve. The pin extends and is rotated in the slide and the

Art Unit: 3637

sleeve is rotatable about the transverse portion. Also, as part of the means, is a socket substantially parallel with the transverse portion which is adapted to receive the transverse portion when the stanchion is in its unfolded position.)
